

PIN Protocol

PIN 协议技术与商业白皮书

A decentralized digital-asset protocol on BNB Smart Chain — transparent on-chain rules, automated incentives, and an expandable application stack built around **PIN**.

部署于币安智能链的去中心化数字资产协议：以透明的链上规则、自动激励体系，以及围绕 PIN 构建的可扩展应用矩阵为核心。

结语

Blockchain is reshaping how assets are issued, how liquidity is organized, and how value is distributed. PIN Protocol is built for that shift: an open system on BNB Smart Chain where holders, liquidity providers, and builders share upside under the same transparent rules. 区块链正在重塑资产发行、流动性组织与价值分配方式。PIN Protocol 面向这一趋势，在 BNB Smart Chain 上建立开放协议，使持有者、流动性提供者与建设者在统一透明规则下共享增长。

Rules live in contracts. Value stays on-chain.

规则写在合约里，价值留在链上。

NORTH STAR

From incentive token → application layer → cross-chain asset network → sovereign public chain.

从激励代币，到应用层，再到跨链资产网络，最终迈向自主公链。

The PIN token contract follows battle-tested BEP-20 patterns and encodes economic rules directly in bytecode. Critical state changes are auditable on explorers — no hidden off-chain settlement for core transfers, fees, or burns.

PIN 代币合约遵循成熟的 BEP-20 模式，将经济规则直接写入字节码。关键状态变更均可在浏览器审计追溯——核心转账、税费与销毁不依赖隐性链下结算。

A

Contract-first safety

Mature interfaces, explicit privilege boundaries, and on-chain traceability.

成熟接口、清晰权限边界，以及完整链上可追溯性。

B

Automated rules

Buy/sell fees, LP dividends, and buyback-burn loops execute without manual discretion.

买卖税费、LP 分红与回购销毁循环自动执行，减少人工裁量。

C

Decentralized rewards

Buy-side fees flow to PIN/BNB LP holders by share — rewarding real liquidity.

买入税费按份额流向 PIN/BNB LP 持有者，奖励真实流动性贡献。

D

Public verifiability

Supply, transfers, fees, and black-hole burns are open to every participant.

供应量、转账、税费与黑洞销毁对全体参与者公开可验。

BSC

BEP-20 network
发行网络

Hard-capped at 200,000 PIN. Sell-side buyback burns and scenario-driven burns in the app layer create ongoing deflationary pressure.

总量硬顶 200,000 PIN。卖出侧回购销毁与应用层场景销毁，形成持续通缩压力。

BUY · 3%

LP Dividend

A 3% buy fee is distributed to PIN/BNB LP holders by proportion — trading volume directly funds liquidity providers.

买入扣税 3%，按 LP 持有比例分配给 PIN/BNB 流动性提供者，交易量直接反哺做市。

SELL · 5%

Buyback & Burn

Selling incurs a 5% tax deduction, of which 60% is held in contracts and 40% is used for marketing. Each time the pump-and-dump interface uses the contract balance, a certain percentage is used to buy * and then burned in a black hole.

卖出扣税5%，其中60%以 BNB 积存在合约，40%用于营销。拉盘接口每次使用合约 BNB 余额的 5% 买入 PIN 并打入黑洞销毁。

AUTOMATION

An offline script can call the pump interface on a fixed cadence (e.g. hourly), creating a steady buyback-burn rhythm.

链下脚本可按固定节奏（如每小时）调用拉盘接口，形成稳定的回购销毁节奏。

SURFACES

Read: standard ERC views + cumulative BNB spent on pumps. Write: pump, fee-exempt lists, dividend lists,

and owner emergency token rescue.

只读：标准视图 + 累计拉盘消耗 BNB。写入：拉盘、免税名单、分红名单，以及权限地址应急取出。

Phase one centers on the WAP exchange stack — liquidity, speed, yield, prediction markets, and bridges — closing the loop from token mechanics to real usage.

第一阶段以 WAP 交易所板块为核心，覆盖流动性、效率、收益、竞猜与跨链，把代币机制接到真实使用场景。

01

LP dividends

Add liquidity easily and earn buy-fee dividends as a PIN/BNB LP holder.

便捷添加流动性，以 PIN/BNB LP 参与买入税费分红。

02

Faster interaction

Optimize routing so major token swaps and compositions feel snappier on-chain.

优化路由，提升各大代币兑换与组合交互速度。

03

Stake to earn

Stake PIN for extra yield — deepen long-term holding and protocol float.

质押 PIN 获取额外收益，强化长期持有与协议底仓。

04

Prediction mode

Withdrawals take a 5% fee dedicated to burning PIN — usage-driven deflation.

竞猜提现收取 5% 手续费专项销毁 PIN，形成场景驱动通缩。

05

Cross-chain bridge

Move digital assets across chains — PIN as a liquidity hub between networks.

在不同链间转换数字资产，让 PIN 成为跨网络流动性枢纽。

+

Product surface

Swap (PIN as base), V2 pools, bridge & stake & predict (coming soon), partnerships desk.

Swap (PIN 作基础币)、V2 池、跨链/质押/竞猜（敬请期待）、商务合作入口。

Meet any one of the three conditions below and unlock complimentary technical services — DApp builds, token launches, and ecosystem ops support.

满足以下任一条件，即可获得技术人员免费服务资格：协助搭建 DApp、代币发售与生态运行。

01

VIP burn channel

Hold PIN and burn a required amount to open a 1:1 VIP line with the technical team.

持有 PIN 并销毁规定数额，开启与技术团队的一对一 VIP 沟通通道。

02

PIN as base pool

Use PIN as the project's base liquidity pool asset — co-build depth and market presence.

以 PIN 作为项目底池资产，共同建设流动性深度与市场存在感。

03

5% community airdrop

Airdrop 5% of your token supply to wallets that hold PIN — give back to the PIN community.

将代币总量的 5% 空投至持有 PIN 的钱包地址，回馈 PIN 社区。

When VIP 1:1 partnerships and holder count cross defined thresholds, PIN advances toward its own public chain — with PIN as the native unit for digital-asset conversion and settlement.

当 VIP 一对一合作与持有者数量达到既定阈值，PIN 将推进自主公链建设，以 PIN 作为数字资产转换与结算的原生价值单元。

Stage I — Core loop

Ship token contract, fee dividends, and buyback-burn closed loop.

完成代币合约、税费分红与回购销毁闭环。

Stage II — WAP core

Launch Swap, LP tools, and partnership entry points.

上线 Swap、LP 工具与商务入口。

Stage III — Scenario burn

Expand stake, prediction, and bridge — usage feeds deflation.

扩展质押、竞猜与跨链，让使用反哺通缩。

Stage IV — Sovereign chain

Threshold met → PIN public chain and multi-asset conversion network.

阈值达成 → PIN 公链与多资产转换网络。

Build with rules you can verify.

用可验证的规则共建。

PIN Protocol starts with secure, transparent smart contracts; runs on liquidity incentives and scenario burns; expands through the WAP stack and open partnerships; and aims at a public chain for digital-asset conversion.

PIN Protocol 以安全透明的智能合约为底座，以流动性激励与场景通缩为引擎，以 WAP 应用与开放合作为扩张路径，最终指向承载数字资产转换的公链。

Sustainable crypto networks are made of clear rules, reliable code, and communities that stay.

PIN invites every participant into that journey — from token, to protocol, to chain.

可持续的加密网络，来自清晰规则、可靠代码，以及愿意长期留下的社区。PIN 邀请每一位参与者，走过从代币到协议、再到公链的跃迁。
